

Garden Tools
THE TOOLS TO TRUST

Spear & Jackson
Since 1760

THE TOOLS TO TRUST

Spear & Jackson was founded in the City of Sheffield which is famous for the production of steel, cutlery and hand tools and continues to be our home over 250 years later.

In 1889, James Neill formed his own company adopting the Eclipse brand name. Initially manufacturing steel, he moved on to manufacture machine knives, woodworking tools and hacksaw blades, for which the company is best known.

The Spear & Jackson range was developed independently of Eclipse branded products until 1985 when James Neill acquired the Spear & Jackson group, subsequently renaming the company as Spear & Jackson.

The Spear & Jackson brand is probably best known for our unparalleled range of quality garden digging and cultivating tools and cutting tools, all of which are designed to appeal to all levels of garden expertise and budget.

While Eclipse is recognised worldwide as the professionals' choice for metal cutting and machinery workshop hand tools.

As you would expect with over 250 years of experience, the Spear & Jackson ground work product offering has widened to accommodate natural product extensions such as contractors shovels and rakes, agricultural

tools and landscaping products.

Spear & Jackson hand tools developed alongside our ground work ranges and include tools for DIY and professional use, with our market leading "Predator" branded wood saws being the first range to be application lead, giving users the most appropriate saw for the task.

The Eclipse product range also has widened to accommodate natural product extensions, such as holesaws, jigsaw blades, reciprocating blades, locking jaw pliers, bolt and cable cutters, aviation snips, riveters, vices, heavy duty woodworking and metalworking clamps, engineers hand tools, plumbing tools, adjustable wrenches, hose clips and torque control tools. All designed and manufactured to the highest possible quality standards.

We also sell a wide range of builder's tools and accessories with prices and qualities to suit all levels of expertise including the well known Tyzack brand of professional brick laying and plasterer's tools.

Spear & Jackson Australia is a division of the Spear & Jackson Group, which also includes within it's other divisions the following brands:

- Moore & Wright
- Eclipse Magnetics
- Bowers
- Baty
- Robert Sorby

Spear and Jackson Australia was established in May 1957 and continues to provide customers with a great range of products.

Spear & Jackson head office is based in the UK with other sites in North America, France, China.

Throughout development of the Spear & Jackson brand, the company has always continued to innovate both in terms of new ideas and applications, using new technologies and combining new and traditional materials to create reliable, superb quality, highly functional tools at affordable prices, creating our enviable reputation as a supplier of **the tools to trust**.

Razorsharp Garden Cutting

“Making gardening easier and more enjoyable”

Our Razorsharp Garden Cutting range includes a wide selection of mechanical advantage, high-performance secateurs, shears and loppers to reduce the effort needed to tackle the smallest to the largest of garden cutting jobs. Let Razorsharp take the load! Razorsharp products promise not to disappoint and come with a **10-year guarantee**.

Garden Cutting Razorsharp Range

Razorsharp® PRO

The **Razorsharp® PRO** cutting tool range has been designed to meet the needs of professional gardeners and landscapers. Competitively priced, the range features drop-forged carbon steel interchangeable blades, forged aluminium handles for strength and durability and adjustable blade tensioning.

Razorsharp® Advance

The **Razorsharp® Advance** collection incorporates innovative technology like geared and ratchet mechanisms, ergonomic design and new materials to make gardening so much easier and more enjoyable.

Razorsharp® Advantage

The **Razorsharp® Advantage** collection features the finest precision cutting range of tools and is the obvious choice for gardeners who demand and expect precise, powerful performance.

Razorsharp® Active

Our **Razorsharp® Active** collection combines quality with excellent value for money to appeal to those with a new found love of gardening.

Razorsharp - Added Mechanical Advantage

Many of our Secateurs and Loppers have added mechanical advantage to make cutting easier with less effort needed by the user.

Gearing gives you 20% more cutting power than standard pivot joints

Dual Compound cutting action gives you 80% more cutting power than standard pivot joints

Dual Gearing gives you 25% more cutting power than standard pivot joints

Ratchet cutting action gives you 110% more cutting power than standard pivot joints

Compound cutting action gives you 60% more cutting power than standard pivot joints

Garden Cutting

Razorsharp Mechanical Advantage

Many of our Secateurs and Loppers have added mechanical advantage to make cutting easier with less effort needed by the user...

CUTTING MECHANISMS - LOPPERS, SECATEURS & SHEARS

There are a number of factors to be considered when selecting a garden cutting tool which is ideal for the intended user.

One of those important factors is the amount of physical effort required to operate that particular cutting tool.

A standard design of secateurs or loppers with blades that form a simple pivot joint (e.g., like a typical pair of scissors) can be termed as having no mechanical advantage.

Therefore the ease of cut depends entirely on the diameter of material being cut, hardness of material being cut, blade profile, handle length (for leverage) and the strength of the user.

But there are ways to reduce the amount of effort required to achieve a certain cut, mechanical advantage being one of them.

Geared

Extra cutting power (mechanical advantage) is provided by the meshing of teeth (cogs) positioned at the top of the handle and base of the blade. As the teeth mesh, it creates torque, which in turn creates extra cutting force between the blades. Our comparative testing suggests geared action can provide over 20% extra cutting power over a standard (pivot joint) mechanism.

Compound

Extra cutting power (mechanical advantage) is provided by the linkage between the handles and blades which creates extra leverage but without increasing the overall length of the cutting tool. Our comparative testing suggests that compound action can provide over 60% extra cutting power over a standard mechanism.

Dual Compound

A further enhancement of compound cutting action is dual compound action. The extra cutting power is now provided for both handles (blades) at the same time, rather than just via one handle (blade). This means the extra power is distributed across both arms for an even easier cutting performance, which our comparative testing suggests is up to a 25% improvement on single compound. Dual compound means both left and right handed users get the maximum benefit of the extra cutting force because there is no 'one sided' bias.

Ratchet Action

Strongly indicated by our comparative testing to be the most effective means of employing mechanical advantage to garden cutting. A series of ratchets enables the user to cut in steps, usually 3 or 4, through surprisingly thick stems. This type of mechanism requires a different cutting technique by the end user, which is not always immediately mastered. However, our comparative testing suggests ratchet action can provide over 110% extra cutting power....So it is well worth users learning how to properly use ratchet action garden cutting tools.

Garden Cutting

Razorsharp Pro Secateurs

The Razorsharp® PRO range of secateurs features drop forged blades, aluminium handles and rubber shock absorbers...

10
YEAR
GUARANTEE

SJ-6959BS Ergo Bypass Secateurs

- Drop forged, high carbon steel blades with sap groove
- Blade notched for cutting thicker stems
- Lightweight forged aluminium handle
- Adjustable blade tension
- Two step catch providing a choice of cutting widths
- Rubber shock absorber

Max Cut 20mm

SJ-6659BS Heavy Duty Bypass Secateurs

- Drop forged, high carbon steel blades with sap groove
- Blade notched for cutting thicker stems
- Lightweight forged aluminium handle
- Adjustable blade tension
- Two step catch providing a choice of cutting widths
- Rubber shock absorber

Digging Tools Range

No one demands more from their tools than the professionals who work in environments where performance is a must. At **Spear & Jackson**, we have been supplying contractors with reliable, professional-quality hand and groundwork tools for over 250 years.

Digging Tools

A range of digging tools as tough as Australian contractors

Australian contractors choose Spear & Jackson because they know our tools can be trusted to give outstanding performance in tough on-site conditions, day after day, year after year.

Our professional tools are designed to the highest international quality standards and are developed through unique insights into what the trade really needs. We've done extensive research in each of our international markets to make sure our specialist tools look, feel and work right every time.

So, when a tradesman reaches for a Spear & Jackson tool, they know it's a tool they can trust. No wonder thousands of contractors, ground workers, Local Authorities and Utilities around the world rely on Spear & Jackson professional hand and groundwork tools to get the job done.

Your customers demand the best, offer them the best - Spear & Jackson.

- One-piece hardwood shaft, split to form a wishbone handle
- Lighter fork with a smaller head for use in borders and between plants

A person wearing a dark t-shirt and jeans is using a stainless steel digging tool in a garden. The tool has a grey handle and a stainless steel head. The person's foot is on the tool's head, which is embedded in the soil. The background shows green foliage and a wooden fence.

Neverbend® Stainless

The Neverbend Stainless series of digging tools boasts a mirror-polished stainless steel finish, ensuring rust-resistant implements that not only last longer but also offer the added benefit of minimal soil adhesion. This feature makes your gardening tasks more effortless and extends the lifespan of your tools.

Supergrip® handle is forward tilting to give the ideal digging angle

The Neverbend® Stainless digging range easily exceeds the BS3388 load test.

Extra long socket for added strength

Mirror polished stainless steel head for rust resistance and minimal soil adhesion

- Made from tough durable moulded plastic

**THE KEW
GARDENS**
COLLECTION

Over 260 years of expertise...

Royal Botanic Gardens Kew

The Royal Botanic Gardens Kew has a remarkable heritage, originally a nine-acre site on the banks of the River Thames, it was first laid out in 1759 by Princess Augusta, mother of King George III.

Over 260 years later the gardens today cover 326 acres, are home to 40 historically important buildings and house the largest living plant collection in the world, with over 40,000 species. On 3 July 2003 the gardens became a United Nations World Heritage Site.

Kew Gardens receives over 1.35 million visitors a year from around the world and has a strong and growing membership of over 80,000 supporters worldwide.

Rich in history, Kew Gardens is also an internationally respected centre of plant science, conservation and academic excellence with the largest and most diverse

botanical collections under its care. Kew's Millennium Seed Bank is the largest global plant conservation project in the world and will eventually hold the seeds of at least half of all known plants.

Kew's unique combination of extensive collections, databases, scientific expertise and global partnerships plays a leading role in facilitating access to fundamental plant and fungal information. The core purpose of Kew's science stems from a simple and often overlooked truth: all our lives depend on plants and fungi.

For more information please visit: www.kew.org.
